

U.S. Lubricants Launches THRIVE® Antifreeze Product Line

New THRIVE® antifreeze is your cooling system's best defense. U.S. Lubricants has introduced a light-duty (automotive) and heavy-duty antifreeze product line developed to meet the demands of your current or future engines.

THRIVE® antifreeze is manufactured with high-performance virgin ethylene and provides excellent freeze and boil-over protection. Each batch is monitored for quality control assurance and is manufactured in-house in the United States to guarantee a quality product with zero recycled fluids.

Available in 3/1-gallon cases, to better serve the industry through a lighter package, THRIVE® antifreeze diversifies the standard dealership or repair shop stocking strategy to guarantee all services are covered each day.

THRIVE® prediluted ready-to-use antifreeze is manufactured with the reverse osmosis water, which prohibits scaling and corrosion of all cooling system metals, including aluminum. THRIVE® takes extra steps to provide quality products and exceed both industry standards and your expectations. THRIVE® antifreeze is available in the following formulas:

[Light Duty \(Automotive\)](#): Conventional Green, Extended Life Yellow, DEX-COOL® Compatible Orange

[Heavy Duty](#): Pre-Charged Green, Pre-Charged Pink, Nitrite Free Red, Nitrite Free Yellow, Extended Life (NOAT) Red
